

# 081 Math Practice

## Area

Area is a two-dimensional measure of how much surface is in a region. Area is measured in square units such as square inches (sq. in.) or square feet (sq. ft.). You can find the area of a rectangle by multiplying its length by its width.

*Example:* Find the area of this rectangle.

$$\begin{aligned} A &= \text{length} \times \text{width} \\ A &= 3 \text{ units} \times 2 \text{ units} \\ A &= 6 \text{ square units} \end{aligned}$$

The area is 6 sq. units.

**Find the area of each rectangle. Remember to include the correct units in each answer.**

Michelle is planning to purchase new carpeting for her family room. The room measures 14 feet x 18 feet. How much carpeting should Michelle buy?

- a. 252 feet
- b. 32 square feet
- c. 64 square feet
- d. 252 square feet

# 082 Math Practice

## Volume

*Volume* is the measurement of three-dimensional space, such as the space inside a room or a ball. Volume is measured in cubic units such as cubic inches (cu. in.) or cubic feet (cu. ft.). The volume of a shape is the measure of how much it holds. You can find the volume of a rectangular prism by multiplying its length, width, and height.

*Example:* Find the volume of a rectangular prism with a length of 3 inches, a width of 2 inches, and a height of 2 inches.

Volume = length x width x height

$$V = l \times w \times h$$

$$V = 3 \times 2 \times 2$$

$$V = 12 \text{ cu. in.}$$

The volume is  $3 \times 2 \times 2$ , or 12 cu. in.

**Find the volume of each rectangular prism.**
