## HS-ESS2-4 Earth's Systems

Science & Engineering Practices	Disciplinary Core Ideas	Performance Expectations
<ol style="list-style-type: none"> <li>1 Asking questions (for science) and defining problems (for engineering)</li> <li>2 Developing and using models</li> <li>3 Planning and carrying out investigations</li> <li>4 <b>Analyzing and interpreting data</b> <b>Analyzing data in 9–12 builds on K–8 and progresses to introducing more detailed statistical analysis, the comparison of data sets for consistency, and the use of models to generate and analyze data.</b> <ul style="list-style-type: none"> <li>• <b>Analyze data using computational models in order to make valid and reliable scientific claims.</b></li> </ul> </li> <li>5 Using mathematics and computational thinking</li> <li>6 Constructing explanations (for science) and designing solutions (for engineering)</li> <li>7 Engaging in argument from evidence</li> <li>8 Obtaining, evaluating, and communicating information</li> </ol>	<p><b>Earth and the Solar System:</b> (secondary to HS-ESS2-4)</p> <ul style="list-style-type: none"> <li>• Cyclical changes in the shape of Earth's orbit around the sun, together with changes in the tilt of the planet's axis of rotation, both occurring over hundreds of thousands of years, have altered the intensity and distribution of sunlight falling on the Earth. These phenomena cause a cycle of ice ages and other changes in climate.</li> </ul> <p><b>Earth Materials and Systems:</b></p> <ul style="list-style-type: none"> <li>• The geological record shows that changes to global and regional climate can be caused by interactions among changes in the sun's energy output or Earth's orbit, tectonic events, ocean circulation, volcanic activity, glaciers, vegetation, and human activities. These changes can occur on a variety of time scales from sudden (e.g., volcanic ash clouds) to intermediate (ice ages) to very long-term tectonic cycles.</li> </ul> <p><b>Weather and Climate:</b></p> <ul style="list-style-type: none"> <li>• The foundation for Earth's global climate system is the electromagnetic radiation from the sun, as well as its reflection, absorption, storage, and redistribution among the atmosphere, ocean, and land systems, and this energy's re-radiation into space.</li> </ul>	<p><b>HS-ESS2-4</b> <i>Students who demonstrate understanding can:</i></p> <p><b>Analyze and interpret data to explore how variations in the flow of energy into and out of Earth's systems result in changes in atmosphere and climate.</b></p> <p><b>Clarification Statement:</b> Changes differ by timescale, from sudden (large volcanic eruption, ocean circulation); to intermediate (ocean circulation, solar output, human activity) and long-term (Earth's orbit and the orientation of its axis and changes in atmospheric composition). Examples of human activities could include fossil fuel combustion, cement production, or agricultural activity and natural processes such as changes in incoming solar radiation or volcanic activity. Examples of data can include tables, graphs, maps of global and regional temperatures, and atmospheric levels of gases.</p> <p><b>Assessment Boundary:</b> N/A</p>

### Crosscutting Concepts: Cause and Effect

- Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.

## Oklahoma Academic Standards Connections

ELA/Literacy	Mathematics
<p><b>SL.11-12.5</b> Make strategic use of digital media (e.g., textual, graphical, audio, visual, and interactive elements) in presentations to enhance understanding of findings, reasoning, and evidence and to add interest.</p>	<p><b>MP.2</b> Reason abstractly and quantitatively.</p> <p><b>MP.4</b> Model with mathematics.</p> <p><b>HSN-Q.A.1</b> Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays.</p> <p><b>HSN-Q.A.2</b> Define appropriate quantities for the purpose of descriptive modeling.</p> <p><b>HSN-Q.A.3</b> Choose a level of accuracy appropriate to limitations on measurement when reporting quantities.</p>

\*The performance expectations marked with an asterisk integrate traditional science content with engineering through a Practice or Disciplinary Core Idea.

## HS-ESS2-5 Earth's Systems

Science & Engineering Practices	Disciplinary Core Ideas	Performance Expectations
<p>1 Asking questions (for science) and defining problems (for engineering)</p> <p>2 Developing and using models</p> <p>3 <b>Planning and carrying out investigations</b>  <b>Planning and carrying out investigations in 9-12 builds on 6-8 experiences and progresses to include investigations that provide evidence for and test conceptual, mathematical, physical, and empirical models.</b></p> <ul style="list-style-type: none"> <li>• <b>Plan and conduct an investigation individually and collaboratively to produce data to serve as the basis for evidence, and in the design: decide on types, how much, and accuracy of data needed to produce reliable measurements and consider limitations on the precision of the data (e.g., number of trials, cost, risk, time), and refine the design accordingly.</b></li> </ul> <p>4 Analyzing and interpreting data</p> <p>5 Using mathematics and computational thinking</p> <p>6 Constructing explanations (for science) and designing solutions (for engineering)</p> <p>7 Engaging in argument from evidence</p> <p>8 Obtaining, evaluating, and communicating information</p>	<p><b>The Role of Water in Earth's Surface Processes:</b></p> <ul style="list-style-type: none"> <li>• The abundance of liquid water on Earth's surface and its unique combination of physical and chemical properties are central to the planet's dynamics. These properties include water's exceptional capacity to absorb, store, and release large amounts of energy, transmit sunlight, expand upon freezing, dissolve and transport materials, and lower the viscosities and melting points of rocks.</li> </ul>	<p><b>HS-ESS2-5</b>  <i>Students who demonstrate understanding can:</i></p> <p><b>Plan and conduct an investigation of the properties of water and its effects on Earth materials and surface processes.</b></p> <p><b>Clarification Statement:</b>                      Emphasis is on mechanical and chemical investigations with water and a variety of solid materials to provide the evidence for connections between the hydrologic cycle and system interactions commonly known as the rock cycle. Examples of mechanical investigations include stream transportation and deposition using a stream table, erosion using variations in soil moisture content, or frost wedging by the expansion of water as it freezes. Examples of chemical investigations include chemical weathering and recrystallization (by testing the solubility of different materials) or melt generation (by examining how water lowers the melting temperature of most solids).</p> <p><b>Assessment Boundary:</b>                      N/A</p>

**Crosscutting Concepts: Structure and Function**

- The functions and properties of natural and designed objects and systems can be inferred from their overall structure, the way their components are shaped and used, and the molecular substructures of its various materials.

### Oklahoma Academic Standards Connections

ELA/Literacy	Mathematics
<p><b>WHST.9-12.7</b> Conduct short as well as more sustained research projects to answer a question (including a self-generated question) or solve a problem; narrow or broaden the inquiry when appropriate; synthesize multiple sources on the subject, demonstrating understanding of the subject under investigation.</p>	<p><b>HSN-Q.A.3</b> Choose a level of accuracy appropriate to limitations on measurement when reporting quantities.</p>

\*The performance expectations marked with an asterisk integrate traditional science content with engineering through a Practice or Disciplinary Core Idea.

## HS-ESS2-6 Earth's Systems

Science & Engineering Practices	Disciplinary Core Ideas	Performance Expectations
<p>1 Asking questions (for science) and defining problems (for engineering)</p> <p>2 <b>Developing and using models</b>  <b>Modeling in 9–12 builds on K–8 and progresses to using, synthesizing, and developing models to predict and show relationships among variables between systems and their components in the natural and designed worlds.</b></p> <ul style="list-style-type: none"> <li>• <b>Develop a model based on evidence to illustrate the relationships between systems or components of a system.</b></li> </ul> <p>3 Planning and carrying out investigations</p> <p>4 Analyzing and interpreting data</p> <p>5 Using mathematics and computational thinking</p> <p>6 Constructing explanations (for science) and designing solutions (for engineering)</p> <p>7 Engaging in argument from evidence</p> <p>8 Obtaining, evaluating, and communicating information</p>	<p><b>Biogeology:</b></p> <ul style="list-style-type: none"> <li>• Organisms ranging from bacteria to human beings are a major driver of the global carbon and they influence global climate by modifying the chemical makeup of the atmosphere.</li> <li>• The abundance of carbon in the atmosphere is reduced through the ocean floor accumulation of marine sediments and the accumulation of plant biomass.</li> </ul>	<p><b>HS-ESS2-6</b>  <i>Students who demonstrate understanding can:</i></p> <p><b>Develop a quantitative model to describe the cycling of carbon among the hydrosphere, atmosphere, geosphere, and biosphere.</b></p> <p><b>Clarification Statement:</b>                      Emphasis is on modeling biogeochemical cycles that include the cycling of carbon through the ocean, atmosphere, soil, and biosphere (including humans), providing the foundation for living organisms.</p> <p><b>Assessment Boundary:</b>                      N/A</p>

### Crosscutting Concepts: Energy and Matter

- The total amount of energy and matter in closed systems is conserved.

## Oklahoma Academic Standards Connections

ELA/Literacy	Mathematics
N/A	<p><b>MP.2</b> Reason abstractly and quantitatively.</p> <p><b>MP.4</b> Model with mathematics.</p> <p><b>HSN-Q.A.1</b> Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays.</p> <p><b>HSN-Q.A.2</b> Define appropriate quantities for the purpose of descriptive modeling.</p> <p><b>HSN-Q.A.3</b> Choose a level of accuracy appropriate to limitations on measurement when reporting quantities.</p>

\*The performance expectations marked with an asterisk integrate traditional science content with engineering through a Practice or Disciplinary Core Idea.

## HS-ESS2-7 Earth's Systems

Science & Engineering Practices	Disciplinary Core Ideas	Performance Expectations
<ol style="list-style-type: none"> <li>1 Asking questions (for science) and defining problems (for engineering)</li> <li>2 Developing and using models</li> <li>3 Planning and carrying out investigations</li> <li>4 Analyzing and interpreting data</li> <li>5 Using mathematics and computational thinking</li> <li>6 Constructing explanations (for science) and designing solutions (for engineering)</li> <li>7 <b>Engaging in argument from evidence</b>  <b>Engaging in argument from evidence in 9-12 builds on K-8 experiences and progresses to using appropriate and sufficient evidence and scientific reasoning to defend and critique claims and explanations about natural and designed worlds. Arguments may also come from current scientific or historical episodes in science.</b> <ul style="list-style-type: none"> <li>• <b>Construct an oral and written argument or counter-arguments based on data and evidence.</b></li> </ul> </li> <li>8 Obtaining, evaluating, and communicating information</li> </ol>	<p><b>Weather and Climate:</b></p> <ul style="list-style-type: none"> <li>• Gradual atmospheric changes were due to plants and other organisms that captured carbon dioxide and released oxygen.</li> </ul> <p><b>Biogeology:</b></p> <ul style="list-style-type: none"> <li>• The many dynamic and delicate feedback mechanisms between the biosphere and other Earth systems cause a continual co-evolution of Earth's surface and the life that exists on it.</li> </ul>	<p><b>HS-ESS2-7</b>  <i>Students who demonstrate understanding can:</i></p> <p><b>Construct an argument based on evidence about the simultaneous co-evolution of Earth's systems and life on Earth.</b></p> <p><b>Clarification Statement:</b>                      Emphasis is on the dynamic causes, effects, and feedbacks between the biosphere and Earth's other systems, whereby geoscience factors influence conditions for life, which in turn continuously alters Earth's surface. Examples include how photosynthetic life altered the atmosphere through the production of oxygen, which in turn increased weathering rates and affected animal life; how microbial life on land increased the formation of soil, which in turn allowed for the development of land plant species; or how the changes in coral species created reefs that altered patterns of erosion and deposition along coastlines and provided habitats to support biodiversity. Geologic timescale should be considered with the emphases above.</p> <p><b>Assessment Boundary:</b>                      Assessment does not include a comprehensive understanding of the mechanisms of how the biosphere interacts with all of Earth's other systems.</p>

**Crosscutting Concepts: Stability and Change**

- Much of science deals with constructing explanations of how things change and how they remain stable.
